👤 Portfolio

Summary

Software Developer with 4+ years of experience in designing and optimizing scalable applications, developing interactive UIs, and integrating APIs for seamless data flow. Skilled in React, Java, Spring Boot, and Node.js, ensuring high-performance and responsive web applications. Expertise in CI/CD automation, cloud-based storage, and search optimization, improving system efficiency, reliability, and user experience while driving software quality and seamless deployments.

Skills

Methodologies: Agile, Waterfall, SDLC

Programming Languages: Python, SQL, Java

Frontend Development: HTML5, CSS3, JavaScript, TypeScript, React, Angular, Vue.js, Bootstrap, Tailwind CSS, JQuery

Backend Development: Spring Boot, Spring MVC, Redis, Hibernate, Django, Node.js, Flask, REST APIs, Microservices architecture

Databases: MySQL, PostgreSQL, SQL Server, MongoDB

Cloud Platforms: AWS (S3, EC2, Lambda, RDS), Azure (Azure Blob Storage, Azure DevOps), GCP

Version Control: Git, GitHub, GitLab

Container technologies: Docker, Kubernetes

Testing Frameworks: JUnit, PyTest, Mocha

Build Tools: Maven, Gradle

Soft Skills: Problem-Solving, Team Collaboration, Communication Skills, Adaptability

Education

Masters in Analytics & Systems | University of Bridgeport, Connecticut

December 2024

Bachelor of Technology in Mechanical Engineering | KL University, India

April 2019

Work Experience

Software Developer | BNY, New Jersey

August 2024 - Current

- Developed interactive **React** dashboards integrating **REST APIs** for financial applications, utilizing **Git** for version control and implementing **Agile** methodologies to enhance UI performance through efficient state management and component reusability.
- Implemented responsive design with **React** and modern CSS frameworks, optimizing for cross-browser compatibility and **AWS S3** hosting, while improving page load speeds through lazy loading and efficient asset management.
- Designed scalable microservices using **Java Spring Boot** with RESTful APIs and **SQL Server database** integrations, deploying on **AWS EC2** and optimizing queries to reduce response times by 35%.
- Configured and maintained **CI/CD pipelines** with **Jenkins** automating builds tests and deployments while conducting code reviews and writing **JUnit** tests to ensure code quality and system reliability reducing deployment failures by 50%.

Software Developer | Vivma Software Inc, India

December 2022 - July 2023

- Developed an interactive Job Module with a **dynamic UI**, improving search functionality and user engagement by optimizing front-end rendering, implementing responsive design, and ensuring seamless navigation across devices for an enhanced user experience.
- Enhanced search efficiency by integrating real-time filtering and autocomplete suggestions using **JavaScript** and **React**, improving responsiveness and usability while reducing input lag for faster, more intuitive job searches.
- Implemented **Elasticsearch** for indexing and querying large datasets, optimizing search speed and accuracy, reducing query response times, and enhancing system performance to support high-traffic workloads efficiently.
- Managed **AWS**-based data storage and synchronization with **S3**, optimizing cloud resource utilization, ensuring secure file handling, and streamlining data retrieval processes for improved system scalability and operational efficiency.

Software Engineer | IBM India Private Limited, India

March 2021 - November 2022

- Developed and optimized demo websites for Luminor Bank, ensuring seamless **UI/UX** across Estonia, Latvia, and Lithuania while enhancing frontend performance, accessibility, and responsiveness to support banking services across multiple regions.
- Implemented backend automation scripts for system health checks and component monitoring using **Python** and **New Relic**, enabling proactive issue detection, minimizing downtime, and improving overall system reliability.
- Integrated and optimized authentication flows, automating smart ID validation using **Spring Boot** and **REST APIs** to ensure secure login processes while enhancing backend efficiency, reducing authentication errors, and improving user login experience.
- Enhanced system performance by identifying and resolving backend bottlenecks, optimizing **SQL** queries, and improving monitoring capabilities with **Elasticsearch** to ensure smooth banking operations and maintain system stability under high transaction loads.

Software Developer | Sage Softtech, India

July 2019 - February 2021

- Developed telemedicine applications using **Angular** and **TypeScript**, ensuring seamless UI interactions and accessibility, integrating **REST APIs** for real-time communication, optimizing patient-provider engagement and enhancing the user experience with faster load times.
- Enhanced a patient management system by implementing dynamic UI components with **Vue.js**, improving navigation and data visualization while optimizing front-end performance through code splitting and efficient state management, reducing UI rendering time.
- Built scalable backend services using **Node.js** and **Express**, integrating secure **REST APIs** with **PostgreSQL** and optimizing database queries through indexing and caching, improving data retrieval speed by 40% and ensuring seamless patient record management.
- Implemented **CI/CD pipelines** with **Jenkins** and **Docker** for automated deployments, integrated API testing using **Pytest**, reducing downtime by 25% and ensuring smooth software releases in an **Agile** environment.
